

# Syllabus Supplement for Chemistry 328N

Organic Chemistry for Chemical Engineers

Spring 2019 - 50120

T/Th 12:30 - 2:00 p.m. WEL 2.122

**Homework:** Homework will be assigned on Tuesday of each week and is due the following Monday by 5 p.m. The homework includes problems assigned from the text and “supplemental problems”. Answers for the questions in the text are in the Study Guide and answers to the supplemental problems will be posted on the web site.

Only three or four of the assigned problems will be graded from each assignment. The maximum score is 10 points. The homework score will constitute 20% of your grade. Many of the exam questions will closely resemble the homework problems and as an added incentive, at least one problem on each exam will be “lifted” directly from the homework assignments. These assignments are an important part of the teaching process. ***Do not get behind.*** Those who work the problems and understand them are those most likely to earn high grades in this course.

Please submit your homework in the marked slot for our class that is in the cabinet shown below, which is across from WEL 2.140. This cabinet is just down the hall to the east of our classroom. Please use 8.5x11 inch paper. Fold the paper lengthwise and PRINT your name on the outside of the document and on the upper right hand corner of each page.

Your graded ***papers can be retrieved one week after the due date*** from the organic teaching lab storeroom in NHB 1.104A (west end of the building) by showing your photo ID. They are only available during hours when the labs are NOT running...that is, **Monday - Thursday 12-2pm and Friday 2-5pm.**
